

Analytics Engineer

Join a fast-moving team focused on modern analytics, scalable data models, and actionable business insights.

JOB TYPE	Fully Remote	ROLE TYPE	Full-Time
----------	--------------	-----------	-----------

About the Role

We are seeking a highly skilled and motivated **Analytics Engineer** with a strong focus on data modeling and emerging technology. This role is responsible for transforming, consolidating, and interpreting complex data sets to support strategic decision-making, optimize business processes, and improve data reliability across the organization.

What You Will Do

- Collaborate with cross-functional teams to transform, consolidate, and interpret large datasets from multiple sources.
- Elicit, refine, and manage data requirements with business partners and stakeholders.
- Develop, maintain, and optimize data models and databases to improve accuracy, accessibility, performance, and reliability.
- Conduct exploratory data analysis to uncover insights, identify trends, and support data-driven decision-making.
- Design intuitive data visualizations and partner with engineering and analytics teams to maintain data consistency, integrity, and security.
- Document methodologies, analysis processes, and outputs to ensure transparency and replicability.

What You Will Need

- Bachelor's degree in Computer Science, Data, Statistics, Mathematics, or a related field; Master's degree preferred.
- Proven experience in analytics, data science, or a similar role with a strong emphasis on data modeling and analysis.
- Expert-level SQL skills, including complex joins, reproducible code with macros, and CI/CD practices.
- Hands-on experience with dbt, ETL optimization, version control tools such as GitHub or GitLab, and visualization tools such as Sigma or Power BI.
- Experience with Python, R, and/or Julia, plus familiarity with Debezium, Kafka, Snowflake, DBT Core, Airflow, and Postgres.
- Strong analytical, communication, and problem-solving skills, with the ability to convert complex data into actionable business recommendations.

This opportunity is ideal for a candidate who thrives in a collaborative, fast-paced environment and enjoys building reliable analytics foundations that support real business impact.
